

LARGE REORG (SCHID=31/1)

FREQUENCY

This schedule contains all jobs which run during the large reorg schedule – reorganizations of many databases. The first two job in the schedule are CEP CAGEN/CEPCAJOB (change accum jobs) which run as SCHID=31. CEPCAJOB then triggers three groupings: CEPRG1, CEPRG5, CEPRG6 – all with a trigger ID of SCHID=1.

There are four additional groupings which are also auto-scheduled within CA/7, staggered to allow initiator control: CEPRG2, CEPRG3, CEPRG4, and CEPRG7 (all of which run as SCHID=1.).

Please review the flow diagram for a complete list of jobs in this schedule.
